

1 A PRINTER HAVING A SPELL CHECKING FEATURE

2 ABSTRACT OF THE DISCLOSURE

3 A print apparatus having a spell checking feature has a processor and a
4 memory for storing a spell checking program. A computer coupled to the print
5 apparatus may be used to instruct the print apparatus to spell check a document
6 file before printing the document file. The print apparatus incorporates the
7 results of the spell check into the printed document by highlighting, bolding or
8 underlining the misspelled words. Alternatively, the print apparatus operates
9 like a network server to provide spell checking services to the computer and/or
10 to a plurality of computers coupled to the print apparatus via a computer
11 network.
